The credit will not apply if premise access is required and neither the customer nor a representative was available at the customer premise and the Company left a notice in a conspicuous place, or the customer had been disconnected for nonpayment of a bill or request for a cash deposit, or "out of service" conditions exist resulting from natural disasters, or circumstances beyond the control and knowledge of the Company.

- c. Repeat Customer Requests: A one (1) month local service credit will be applied to the customer's telephone bill if the Company fails to accomodate the customer's request the first time and this causes the customer to make a second request within thirty (30) days. Examples of requests which may require multiple business office contacts by a customer include those for billing name and address changes, directory listing changes, request for credit cards or directories, requests for adjustments, repeat reports of service problems, and moves of cable or drop wires. LOCAL EXCHANGE SERVICE TARIFF

A. GENERAL

Paystation Service provides telephone service to a customer-leased or owned paystation with or without coin collecting devices. A Paystation Access Line permits providers of such service to provide pay telephone service to the public.

B. DEFINITIONS

Coin Supervision - Provides signaling capability from the central office for paystations that do not have signaling capability within the telephone. This signaling capability provides operators and/or operator systems coin control.

Customer - For the purposes of this tariff, the customer is the Paystation Service Provider.

Network Interface Device - A company-provided jack or its equivalent. It is the point of connection between the Company owned wiring and wiring owned by the customer. For the purposes of this tariff, the network interface device will be installed at a location mutually agreed upon by the customer and the Company.

Originating Line Screening (OLS) - Enables operator service providers to determine whether there are billing restrictions on the exchange access line from which a call originates. OLS service delivers codes on operator assisted calls to identify calls originating from privately owned paystations, inmate locations, and hotels/motels, etc. Rates for this service are found in the appropriate interstate access tariff, when facilities and service are available.

Paystation Access Line - A basic coin transmission dial tone line. It is a line side connection from the local exchange switch to the point of demarcation at the customer premises.

Selective Class of Call Screening - Enables the customer to restrict outgoing operator-handled calls, placed over the Company's network, from the service point to only those calls which are charged to a called telephone, a third number, or a calling card. Selective Class of Call Screening will be provided at the customer's option, where such facilities are available.

APR 15 1997

C. RULES AND REGULATIONS

1. Paystation Service will be considered a business service for the purpose of applying the terms, rates and conditions found elsewhere in this tariff.
2. Only one paystation instrument may be connected to each Paystation Access Line. Off-Premise Extensions are not permitted.
